

WHAT IS IPAMORELIN ACETATE?

Ipamorelin Acetate is a Growth Hormone Releasing Peptide (GHRP) that stimulates the pituitary gland within the body to release natural growth hormone (GH). Ipamorelin Acetate is a pentapeptide composed of five amino acids and has a biological half-life of 2 hours after administration. It is widely known for being able to suppress somatostatin or growth inhibiting hormone.

As we age, our hormone levels fluctuate interfering with patient's overall quality of life. Imbalances can result in loss of energy, increased irritability, sleeplessness, memory problems, and low sex drive. Utilizing peptide therapy separately or in conjunction with hormone replacement may restore optimal hormone levels in your patients. Studies suggest that Ipamorelin Acetate did not affect FSH, LH, Prolactin, or TSH levels. Furthermore, Ipamorelin did not seem to have an impact on cortisol and ACTH levels during GHRH stimulation.

WHY WOULD I WANT TO USE IPAMORELIN?

With age, our hormone levels fluctuate and often decline interfering with a patient's overall quality of life. Imbalances can result in loss of energy, increased irritability, sleeplessness, memory problems, and low sex drive. Utilizing peptide therapy separately or in conjunction with hormone replacement may restore optimal hormone levels in your patients. Studies suggest that Ipamorelin Acetate does not clinically affect FSH, LH, Prolactin, or TSH levels. Furthermore, Ipamorelin did not seem to have a clinically adverse impact on cortisol or ACTH levels.

WHAT STRENGTHS & FORMS ARE AVAILABLE?

Reach out to your Account Representative today to get more information on Ipamorelin or to place an order.

WHAT YOU NEED TO KNOW?

Discuss with your physician to see if Ipamorelin would be right for you. Ipamorelin injectable therapy can only be used under a physician's care. With Ipamorelin therapy, you may notice improved recovery after workouts and better quality of sleep. Always inform your physician about changes in medications and supplements. Common side effects, as with any injectable medication, may include injection site reaction such as pain at the injection site.

BENEFITS

Patient benefits over time may include:

- Aid in the body's ability to burn fat
- Helps improve lean muscle mass
- Supports immune system
- Improved sex drive
- Strengthened cardiovascular system
- Improved quality of sleep
- Improved energy and endurance
- Supports bone density
- Improved skin firmness and moisture retention
- Improved cognition and memory
